

UpdateXpress System Pack

Introduction to UXSP

Lenovo

What is an UpdateXpress System Pack?

An UpdateXpress System Pack (UXSP) is an integration-tested bundle of firmware and driver update files. The firmware and driver update files in the bundle have been extensively tested for compatibility with one another, guaranteeing a level of system stability after the service pack has been applied.

UXSPs can be applied with the following tools:

- XClarity Essentials UpdateXpress (GUI tool)
- XClarity Essentials OneCLI (OneCLI)

Note: To remotely update system firmware with XClarity Essentials tools, an SFTP server is required, and you must ensure that port 6990 is enabled for SFTP/SSH.

Downloading an UpdateXpress System Pack

UXSPs can be downloaded from Lenovo Support at <https://datacentersupport.lenovo.com/in/en/>. Work through the following procedure to download an UXSP.

Click each number in turn to see the procedure.

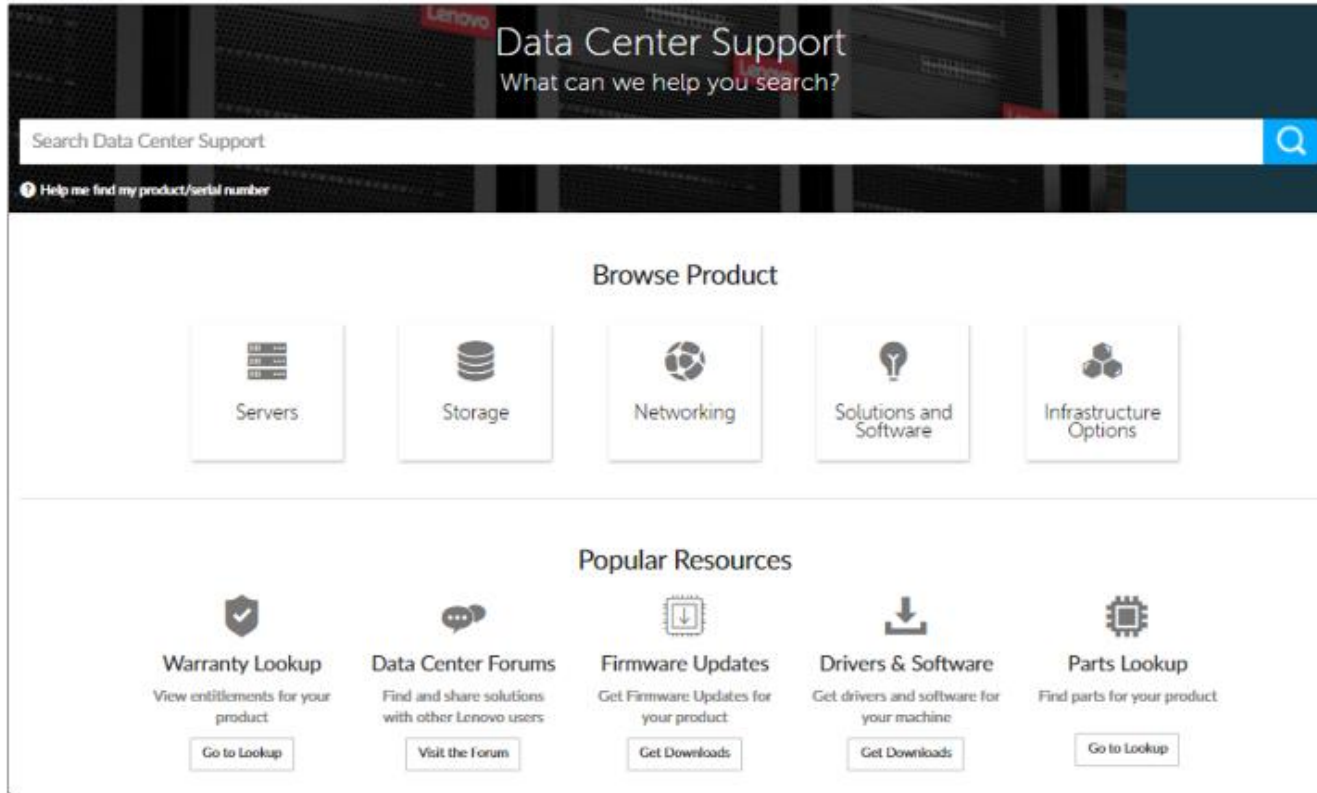

Step

Downloading an UpdateXpress System Pack

Open a Web browser and visit the [Lenovo Data Center Support](#) site.

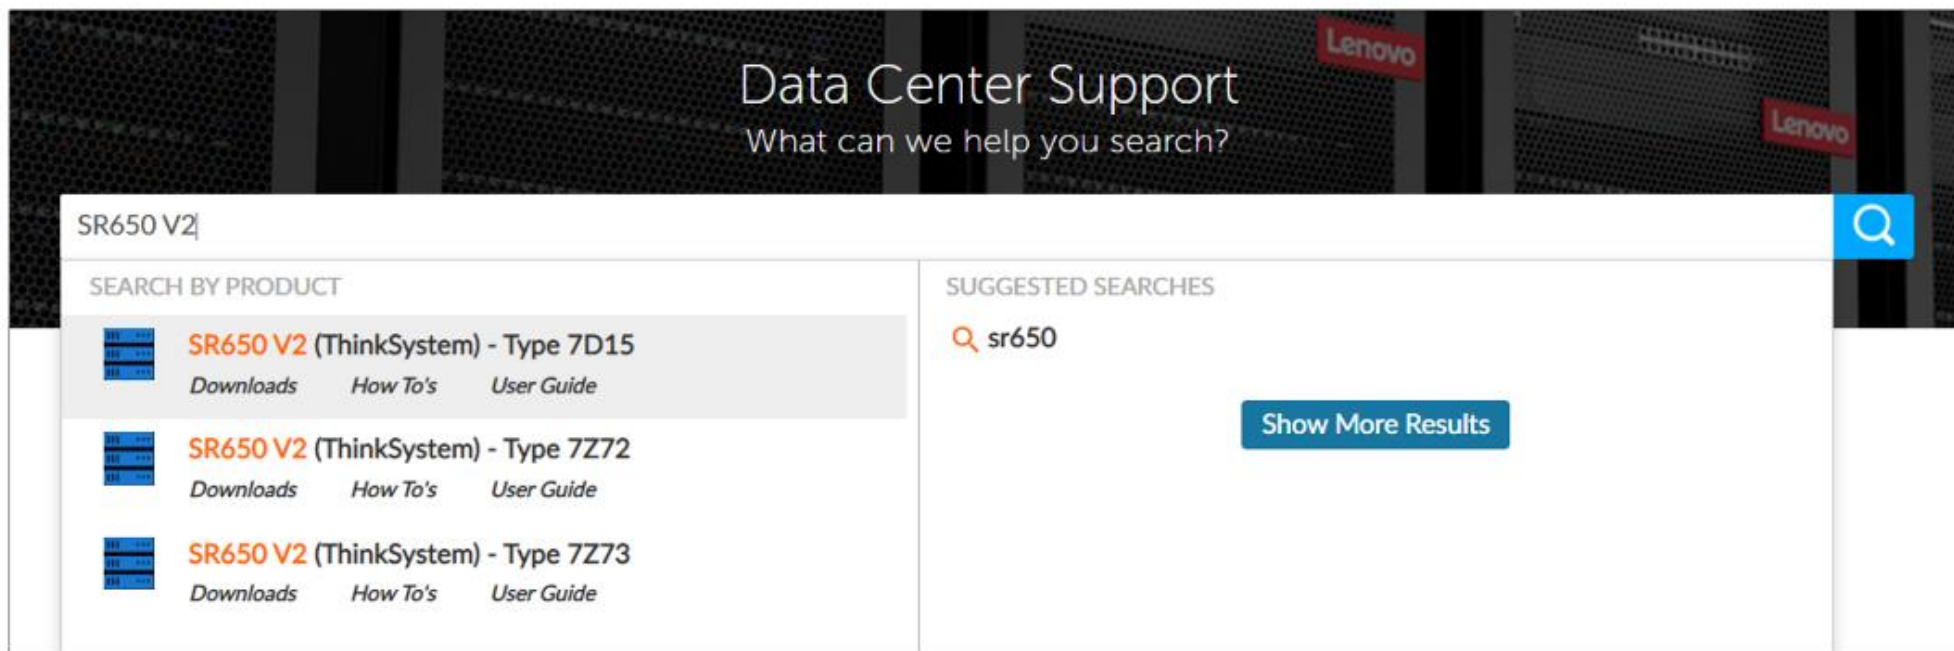

Step

Downloading an UpdateXpress System Pack

Type the product name, serial number, or machine type in the search box, or browse the different categories to find the product.

Step

Downloading an UpdateXpress System Pack

On the product-dedicated support page, select **Drivers & Software** from the menu bar.

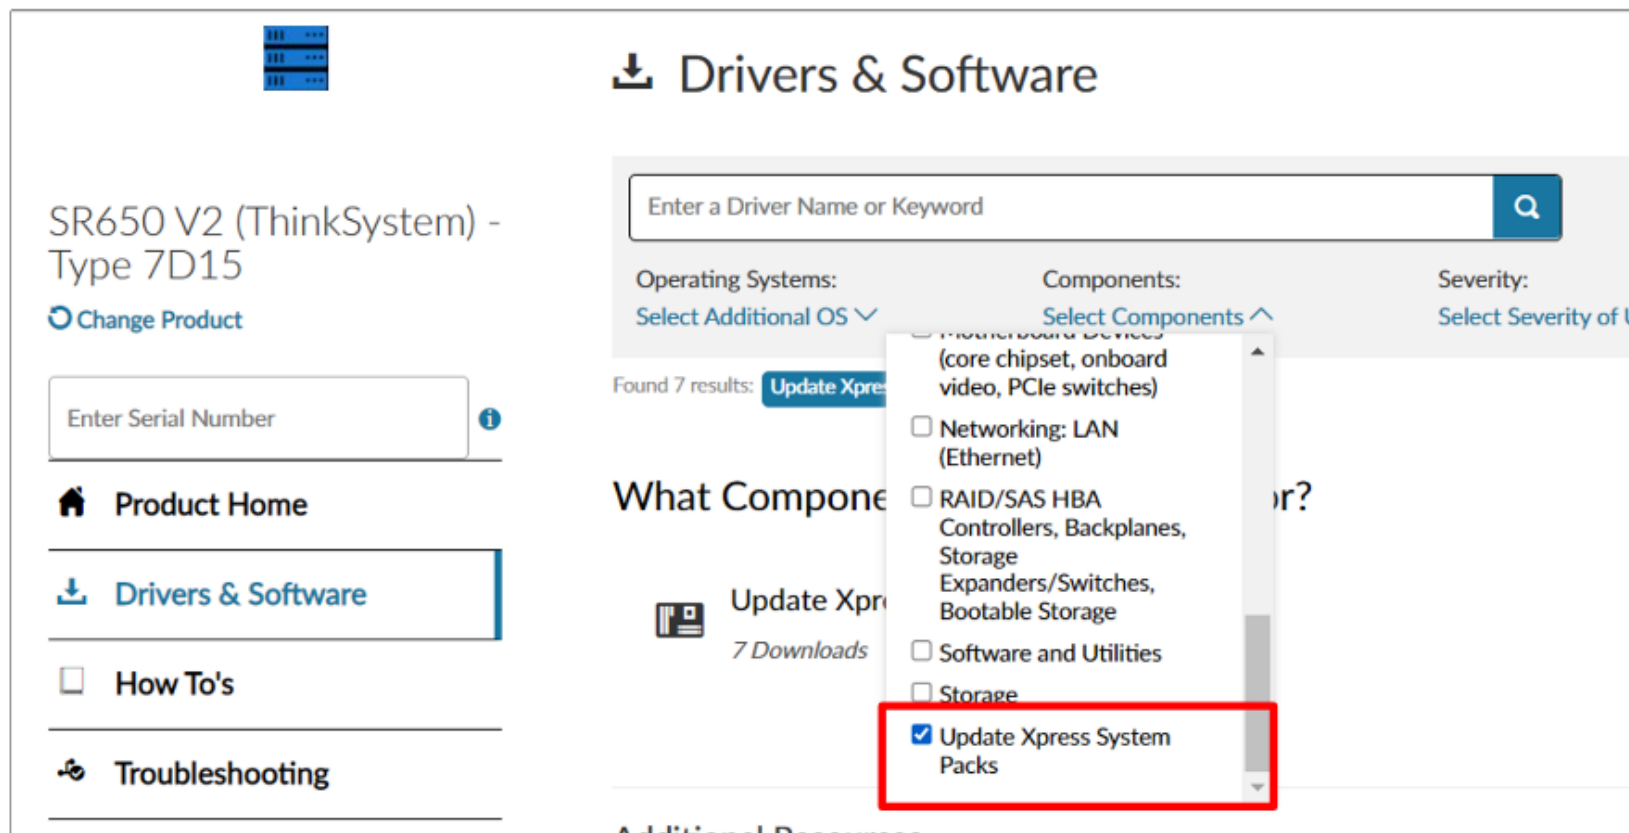

The screenshot shows the Lenovo support page for the SR650 V2 (ThinkSystem) - Type 7D15. The breadcrumb trail at the top reads: Data Center Support > servers > thinksystem > SR650 V2 (ThinkSystem) - Type 7D15. On the left sidebar, the 'Drivers & Software' link is highlighted with a red rectangle. The main content area features a 'Drivers & Software' heading with a download icon, a search bar labeled 'Enter a Driver Name or Keyword', and filter options for Operating Systems, Components, Severity, and Release Date. Below these filters, it states 'Found 188 results:'. A section titled 'What Component Are You Looking For?' displays several categories with download counts: BIOS/UEFI (1 Download), Fibre (28 Downloads), Graphics Processing Units (GPU) and Server-AI Accelerators (4 Downloads), Lenovo Capacity Planner, Lenovo XClarity Controller (LXCC), and Lenovo XClarity Energy Manager (LXEM). The 'Display Results As:' option is set to 'Tile'.

Step

Downloading an UpdateXpress System Pack

In the **Drivers & Software** section, select **UpdateXpress System Packs** from the **Components** drop-down list. This will show only the UXSP files for the system.

Step

Downloading an UpdateXpress System Pack

Click **See Files** → **Download** to download the UXSP files.
