

Static Bundle on ThinkSystem V4 servers

Formerly known as UXSP

Lenovo

UXSP - Static Bundle

Starting with the release of the BHS platform, UpdateXpress System Pack (UXSP) will be known as Static Bundle or Update Bundle. From a service perspective, the procedure used to download Static Bundle with LXCE on ThinkSystem V4 servers has not changed.

LXCE download link:

[Lenovo XClarity Essentials \(LXCE/ToolsCenter\) - Type LXCE](#)

The screenshot shows the Lenovo XClarity Essentials (LXCE) download page. The top navigation bar includes the Lenovo logo, 'SHOP', 'SUPPORT', a search icon, 'My Account', a help icon, 'Taiwan Region', 'English', and a 'Cart' icon. A red banner at the top contains a message about Intel Xeon memory error handling. Below this, the breadcrumb trail reads: 'Data Center Support > Solutions and Software > Software > Lenovo XClarity Essentials (LXCE/ToolsCenter) - Type LXCE'. A link '<< Back To Drivers & Software' is present. The main heading is 'Manual Driver Update', followed by the instruction 'Select a tile or filter option to refine the results.' There are three filter boxes: 'Search by Keywords' with a search icon, 'Operating Systems' with a dropdown arrow, and 'Release Date' with a dropdown arrow. Below the filters, it says 'Found 3 results:' and shows two buttons: 'All Updates (3)' and 'Suggested (3)'. A product tile for 'Lenovo XClarity Essentials (LXCE) (OneCLI, BOMC, UpdateXpress) (3)' is visible. On the left side, there is a placeholder for a product photo with the text 'PRODUCT PHOTO CURRENTLY BEING UPDATED'. Below this, the product name 'Lenovo XClarity Essentials (LXCE/ToolsCenter) - Type LXCE' is displayed, along with a 'Change Product' link and an 'Enter Serial Number' input field. At the bottom left, there are links for 'Product Home' and 'Drivers & Software'. A 'Feedback' button is located at the bottom right.

LXCE acquisition for Static Bundles

Use the following OneCLI command to get the Static Bundles for a specific model:

```
OneCli.exe update acquire --ostype platform --mt xxxx,xxxx,xxxx --dir C:\pkg
```

Sample command:

```
lnvgy_utl_lxceb_onecli02a-4.4.1_winsrv_x86-64.exe update acquire --mt 7d7a --scope uxsp --ostype platform --dir platform
```

```
lnvgy_utl_lxceb_onecli02a-4.4.1_winsrv_x86-64.exe update acquire --mt 7d7a --scope uxsp --ostype platform --dir platform
```

LXCE file name

Specific model 7d7a

To download UXSP
static bundles for all
OS platforms

Click the button to see the sample output

LXCE command

Note: Refer to the LXCE [user guide](#) for more command line details.

Searching for Static Bundles on Lenovo eSupport

Work through the instructions to get Static Bundles for a specific model.

Click each number in turn to see the procedure.

Step

Searching for Static Bundles on Lenovo eSupport

- Go to eSupport: <https://datacentersupport.lenovo.com/at/en/>
- Enter the name of the model you want to search for – ST50 V3 is used as an example here

Step ①—②—③

Searching for Static Bundles on Lenovo eSupport

Select **Drivers & Software**, and then select **Update Bundles (Service Packs) (2)**

Step

Searching for Static Bundles on Lenovo eSupport

In the **System Updates Bundle (Core System + IO Updates - Firmware and Drivers)** section, look for **System Updates Bundle Payload** and click **Download**.

The screenshot shows the Lenovo eSupport interface for ST50 V3 (ThinkSystem) - Type 7DF4. The main heading is 'Update Bundles (Service Packs) (2)'. Below this, there are search filters for 'Search by Keywords', 'Operating Systems', and 'Release Date'. A table lists the available update bundles. The first row, 'System Updates Bundle (Core System + IO Updates - Firmware and Drivers)', is highlighted with a red box. Below this, the 'System Updates Bundle Payload' is listed with a 'Download' button also highlighted with a red box.

File name	Size	Version	Release Date	Security	Options
System Updates Bundle (Core System + IO Updates - Firmware and Drivers)	643.009 MB	sw (Pw74-00x2-24x.0)	13 Jun 2024	Suggested	Details
System Updates Bundle Payload	642.84 MB	sw (Pw74-00x2-24x.0)	13 Jun 2024	Suggested	Download
System Updates Bundle Change History	104 B	sw (Pw74-00x2-24x.0)	13 Jun 2024	Suggested	Download
System Updates Bundle Release Notes (HTML)	69.55 KB	sw (Pw74-00x2-24x.0)	13 Jun 2024	Suggested	Download
System Firmware Bundle (Core System + IO Updates)	606.367 MB	sw (Pw74-00x2-24x.0)	13 Jun 2024	Suggested	Details

Step

Searching for Static Bundles on Lenovo eSupport

In the **System Updates Bundle (Core System + IO Updates - Firmware and Drivers)** section, look for **System Updates Bundle Payload** and click **Download**.

The screenshot shows the Lenovo eSupport website interface for searching for static bundles. The page title is 'Update Bundles (Service Packs) (2)'. The left sidebar contains navigation links: Product Home, Drivers & Software, Troubleshooting, How To's, Guides & Manuals, Warranty & Services, Repair Status, and Contact Us. The main content area has a search bar and filters for 'Operating Systems' and 'Release Date'. A table lists the available update bundles. The first row, 'System Updates Bundle (Core System + IO Updates - Firmware and Drivers)', is highlighted with a red box. Below it, the 'System Updates Bundle Payload' is listed with a 'Download' button highlighted by a red box.

File name	Size	Version	Release Date	Security	Options
System Updates Bundle (Core System + IO Updates - Firmware and Drivers)	643.009 MB	sw (Rn74-00x2-24x.0)	13 Jun 2024	Suggested	Details
System Updates Bundle Payload	642.84 MB	sw (Rn74-00x2-24x.0)	13 Jun 2024	Suggested	Download
System Updates Bundle Change History	104 B	sw (Rn74-00x2-24x.0)	13 Jun 2024	Suggested	Download
System Updates Bundle Release Notes (HTML)	69.55 KB	sw (Rn74-00x2-24x.0)	13 Jun 2024	Suggested	Download
System Firmware Bundle (Core System + IO Updates)	606.367 MB	sw (Rn74-00x2-24x.0)	13 Jun 2024	Suggested	Details

Step

Overview

LXCA 4.2.0 will support the SR630 V4 wave 1 and the SD530 V4 wave 1. Support scope will be limited to the following functions:

- Discovery and management
- Inventory
- Monitoring
- Firmware updates

The LXCA 4.2.0 release date will be aligned with the SR630 V4 wave 1.

LXCA - Discovery and management

LXCA supports the same discovery and management functions on the ThinkSystem V4 platform as it did on the previous V3 platform.

Manage

 SN#1234567890 is going to be managed.

Choose to use managed authentication or not

☒ Managed Authentication

Choose the type of credentials

☒ Use manually entered credentials

☐ Use stored credentials

☐ Use Identity Management credentials

user name

password

☒ Do not create a recovery account and leave all local users enabled.

☐ Create a recovery account and disable all local users.

☐ Create a recovery account from stored credential and disable all local users.

☐ Set new password if credentials are expired (Optional) 

Role Groups: Default

This will perform the following actions against server:

1. Configure NTP clients to use the NTP settings from Lenovo® XClarity Administrator
2. Configure for managed authentication

Manage

Cancel

LXCA - Discovery and management

LXCA supports the same discovery and management functions on the ThinkSystem V4 platform as it did on the previous V3 platform.

Manage

 SN#1234567890 is going to be managed.

Choose to use managed authentication or not

☒ Managed Authentication

Choose the type of credentials

☒ Use manually entered credentials

☐ Use stored credentials

user name

password

☒ Do not create a recovery account and leave all local users enabled.

☐ Create a recovery account and disable all local users.

☐ Create a recovery account from stored credential and disable all local users.

☐ Set new password if credentials are expired (Optional) 

Role Groups:

This will perform the following actions against server:

1. Configure NTP clients to use the NTP settings from Lenovo® XClarity Administrator
2. Configure for managed authentication

LXCA - Inventory

LXCA supports the same inventory functions on the ThinkSystem V4 platform as it did on the previous V3 platform, but with some known limitations.

- LXCA relies on events to update some of its inventory information in real time. However, XCC does not support all event types for the SR630 V4 wave 1, which leads to delays in reflecting some inventory changes in LXCA.

For example, if a user toggles the LED status, the change will not appear in LXCA until an inventory refresh is triggered or when LXCA automatically collects a full inventory.

- CPU and Memory Subsystem Level Utilization** and **Air Temperature History** are not supported for the SR630 V4 wave 1, and LXCA cannot retrieve this data for the **Power and Thermal** page.

The screenshot displays the Lenovo XClarity Administrator web interface. The top navigation bar includes 'Dashboard', 'Hardware', 'Provisioning', 'Monitoring', and 'Administration'. The left sidebar shows a tree view with 'Summary' selected under the 'General' section. The main content area is titled 'Servers > XCC-7DFY-1234567890.pa-lxca.com Details - Summary'. It features a server icon, a status indicator (Normal/On), and a list of actions. Below this, there are sections for 'Status and Health' (Alerts, Event Log, Jobs, Light Path, Power and Thermal) and 'Configuration' (Configuration, Feature on Demand Keys). The right pane shows a detailed summary of the server's properties, including its name, user-defined name, status, host names, IP addresses, rack name, type model, serial number, architecture, description, product name, UEFI firmware, security mode, configuration status, server pattern, system guard status, and action. At the bottom, there is a table for 'Installed Devices'.

	Installed Devices
Processors	2.2 GHz - 144 Processor Cores
Memory	(1) 64 GB
Drives	0
Expansion cards	0

LXCA – Firmware updates

Major changes have been made to the LXCA firmware update function for the BHS platform:

- The BMU update has been replaced by LXUM for BHS. With this change, LXCA no longer uploads the BMU image to XCC port 115 via ssh, and it no longer connects to the BMU OS via port 6990.
- LXCA has added a "multi-push" option to the update process. With this option, multiple updates are pushed to XCC, and then the XCC Redfish API is used to apply them.
- LXCA has introduced a new activation rule called **OnReset Activation**, which pushes updates to XCC for application during the next system reboot.
- The update process for **Delay/Prioritized** activation has been changed.
- An option has been added to disable the **Monitor update process until complete** function. This function is only supported for **OnReset** activation mode, and when it is disabled, LXCA firmware update jobs will stop after the updates have been pushed to XCC.

Refer to the following slides for more information.

Firmware updates - Immediate activation

With immediate activation, LXCA will:

1. Power off the server at the beginning of the process if any updates require a system reboot
2. Apply all core firmware
 - XCC, UEFI, LXUM, LXPM, LXPM drivers
 - Back up XCC and FPGA – due to be supported in v4.2
 - Reboot XCC if XCC or FPGA is updated
3. Push all the reset updates
 - Use the multi-push option to send updates including I/O, RAID, GPU, disk drive, and PSoC to XCC, and then call XCC to apply them
4. Restart the system to make sure all the updates are activated
5. Restore the system power status

Click [HERE](#) for screen captures.

Firmware updates - OnReset activation

With OnReset activation, LXCA will:

1. Push all updates to XCC with the multi-push option
2. Remind the user to restart the device manually. XCC will apply and activate updates during the next system reboot.
 - If **Monitor update process until complete** is enabled (the default option), LXCA will monitor the XCC firmware update job until it is complete. The user can cancel the update before the system reboot. Click [HERE](#) and [HERE](#) for screen captures.
 - If **Monitor update process until complete** is disabled, the firmware update will be carried out after the user is reminded to restart the server. With this option, the canceling of an update is not supported.
3. No power actions will be performed on the system during the update process.

Note: As XCC does not support Backup XCC updates with the multi-push option, OnReset activation cannot be used to update Backup XCC.

Firmware updates - Delayed activation

Delayed activation operates in almost the same way as OnReset activation – the only difference being that Backup XCC will be updated before the multi-push step.

Update Summary

Select your Update Rule and review your updates. Then click Perform Update.

Note: The update job will run in the background and might take several minutes to complete. Updates are performed as a job. You can go to the [Jobs](#) page to view the status of the job as it progresses.

* Update Rule: Continue on error

* Activation Rule: Delayed activation

Selecting "Delayed activation" means that some but not all update operations are immediately performed. Devices must be restarted manually to continue the update process.

☐ Force update

☒ Install prerequisite firmware

☒ Monitor update process until complete

☐ Memory test

All Actions

Device	Rack Name / Unit	Chassis / Bay	Installed Version	Compliance Target
LXCA 10.241.135.113	12 / Unit 43		Update in Progress	

Firmware Updates

Hydra-LXCA

System Readiness Check

XCC (Backup)

Multi Push Update

Finalize

Firmware updates - Prioritized activation

With Prioritized activation, LXCA will make a greater effort to apply and activate core firmware components. LXCA will:

- Update XCC if there are no unmet UEFI prerequisites on the target system, and then reboot XCC to activate it.
- Update LXUM, LXPM, LXPM Linux, and LXPM Windows drivers, and back up XCC – tasks which do not require a system reboot for activation.
- Push all the remaining updates to XCC.
- Remind the user to restart the device manually. XCC will apply and activate updates during the next system reboot.
- Not perform any power actions on the system during the update process except for rebooting XCC after updating it.

Click [HERE](#) for a screen capture.

Note: UEFI will be updated in a multi-push job because activation requires a system reboot. FPGA will be updated in a multi-push job because if it is updated when the system is power on, activation would require an XCC and system reboot.
